

Environmental Policy

Kym Clarke Constructions envisages and strives to complete Construction Projects in a manner that reduces our ecological footprint through developing innovative solutions and management techniques.

Kym Clarke Constructions acknowledges our position of responsibility and leadership as a well know Builder in the region and for that reason we will;

- Manage our operations in a manner consistent with sound environmental management principles
- Actively engage our team members, contractors and Clients in environmental management
- Support research in understanding and improving our environment
- Be innovative in our approach to our Construction activities and environmental values
- Remain aware of emerging trends in environmental issues, resource management and ecological values
- Actively communicate with our interested parties

Continually improving in environmental management is important to our way of doing business. We set out to achieve this by;

- Viewing compliance to legal standards as a formality – where possible we operate above best practice
- Operating our environmental management system is open, transparent and consultative
- Developing and implementing resource re-use programs, in particular building materials
- Avoid, minimise and manage the impact our actions have on the environment
- Identify key environmental issues
- Have strategies and plan for managing issues effectively
- Aiming for balance between the environment, society and the economy
- Follow a Plan Do Check Act model
